

Lana Hébert received her B.Sc. in Chemistry in 2013 from Memorial University of Newfoundland and moved to Ontario to complete her M.Sc. and Ph.D. degrees at Wilfrid Laurier University. Despite a passion for being in the lab, Lana found greater satisfaction during her instructional opportunities as a graduate student; recently, she began a three-year term as an Assistant Teaching Professor in the Chemistry department at York University. As one of the few transgender women in organic chemistry, she aims to remove barriers for others and promote the principles of decolonisation, equity, diversity, and inclusion for all.
